the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply. It is important that we find ways to meet this demand without harming the environment or the world's food supply.

One way to do this is to use sustainable agriculture. Sustainable agriculture is a way of farming that uses natural resources in a way that will not harm them. It uses methods that are good for the environment and that will allow farmers to keep farming for a long time.

Another way to do this is to use sustainable development. Sustainable development is a way of living that uses resources in a way that will not harm them. It uses methods that are good for the environment and that will allow people to keep living for a long time.

There are many other ways to do this. We need to find ways to meet the world's growing demand for food and other resources without harming the environment or the world's food supply. We need to find ways to live in a way that is good for the environment and that will allow us to keep living for a long time.

We need to find ways to meet the world's growing demand for food and other resources without harming the environment or the world's food supply. We need to find ways to live in a way that is good for the environment and that will allow us to keep living for a long time.
