A Partial Specification

```python
if received_on_port == EXT_DEVICE and flow_emap.has(internal_flow):
    return ([...],[ether(h1, saddr=..., daddr=...), ipv4(h2, cksum=...), tcpudp(h3)])
else:
    pass
```

A Partial Specification

```
1  if received_on_port == EXT_DEVICE and flow_emap.has(internal_flow):
2      return ([...],[ether(h1, saddr=..., daddr=...), ipv4(h2, cksum=...), tcpudp(h3)])
3  else:
4      pass
```

Pay-as-you-go: 'pass'

```
1   if received_on_port == EXT_DEVICE and flow_emap.has(internal_flow):
2       return ([...],[ether(h1, saddr=..., daddr=...), ipv4(h2, cksum=...), tcpudp(h3)])
3   else:
4       pass
```
